URBAN FARM GIRL & CO

A few instructions on planting and growing anemones:

- Depending on where you live, you can plant your anemone corms in autumn, late winter or early spring
- Store your corms in a cool, dry location until you're ready to plant
- Before planting, soak corms for 3 hours in cool water, no warmer than 12.5°C (55°F). Use gently running water or change the water during soaking to maintain oxygen.
- After soaking, corms may be planted into the ground or presprouted in vermiculite, peat, or washed coco coir. Anemones grow better if points are facing down.
- To presprout, keep soaked corms at approximately 12.5°C (55°F) for 2 weeks. Keep the growing medium moist, not wet, and don't let the corms dry out.
- Check on the corms every few days, and remove any corms showing signs of mold or rot. Once roots appear, plant corms in the ground.

Thank you for supporting our farm

Wishing you an abundance of blooms this spring!
